

**Романов Александр Анатольевич.  
Английский язык 1 курс. 1 семестр**

**Задание I: Письменно переведите предложения.**

1. The discovery of electron in 1897 was followed by a lot of other scientific discoveries.
2. If translated into Russian this article will be of great interest to our engineers.
3. There was a scientific conference at our Institute. Many student were present there.
4. The more the scientists studied the problem the more they realized its importance for national economy.
5. The results obtained varied with the materials used.
6. As soon as the experiment is finished, the engineers will have to discuss the results.
7. It is our country that has achieved wonderful results in the development of quantum generators: lasers and masers.
8. Physics is the science studying various phenomena in nature and interaction between them.
9. Electronics has penetrated both into every branch of the national economy and our everyday life.
10. New types of electronic devices are to become the basis for the solution (решение) of many economic and scientific problems.
11. The energy, the earth receives from the Sun is used in many ways.
12. Using electronic devices an engineer must have a good knowledge of their characteristics.

7

**Задание II. Прочитайте текст. Поставьте 5 вопросов разного типа по содержанию текста.**

Electronics is the science dealing with devices operated by control of the movement of electric charges in a vacuum, gases or semiconductors. Electronics was born in the 19-th century and first established itself in wireless telegraphy. Today electronics has started a new era. Electronic devices are doing simple but human-like thinking. Some industries are controlled by electronic robots. Planes and rockets are electronically controlled. Some radiotelescopes work like radar and receive radio waves from the outer space. In general electronics is not so much a new subject as a new way of looking at electricity.

§ 60

- Where can use electronics? – специальный вопрос. —
- Today electronics has started a new era, isn't it? – разделительный. —
- Can electronics control planes? – общий +
- Can electronics control planes or rockets? – альтернативный +
- What century was born electronics? – к подлежащему —
